PROFESSIONAL SERVICES Engineering Consultancy

Ellipsiz Communications Engineering Consultants can understand your embryonic business ideas how they relate to IT and other disciplines and can drive the required changes through the project lifecycle stages.

Our Engineering consultants come from a wide variety of backgrounds but share a lust for technology and its application to real life scenarios. They continually refine their expertise through formal training, association with professional bodies and more crucially by being involved with the implementation of the latest technological and product developments.

Our Engineering Consultants can help design a complete solution based on your user requirements and desired business outcomes:-

- Transform architectural solutions into real, deployable systems.
- Produce or give presentations to influence key stakeholders.
- Produce High Level and detailed design documents.
- Design realistic work breakdown structure and timelines.
- Direction on 'best practise' application designs and options.
- Recommend minimum infrastructure requirements.
- Advise on deployment methodologies based on business requirements.
- Inform of recommended data replication options.
- Construct a cost effective disaster recovery solution.
- Perform usability and Human Interaction audits.
- Analyse and design touch and integration points.
- Create tests and acceptance plans.
